Serial No. 09/493,983

## **Version with Markings to Show Changes Made**

## In The Claims

Claims 1 and 9 have been amended as follows:

- 1. (Twice Amended) A motor <u>provided in a turbo-molecular pump</u>, comprising: a rotary shaft; and
- a bearing for radially supporting the rotary shaft, wherein the bearing includes:
  - a cylindrical rotary member connected to the rotary shaft;
- a cylindrical fixed surface surrounding the rotary member, wherein the fixed surface is spaced from the rotary member by a predetermined distance, and wherein the materials of the rotary member and the fixed surface are selected so that the material of the rotary member has a coefficient of thermal expansion that is smaller than that of the material of the fixed surface; and

armature coils arranged about a peripheral surface of the fixed surface to rotate the rotary shaft.

- 9. (Three Times Amended) A motor <u>provided in a turbo-molecular pump</u>, comprising:
- a rotary shaft; and
- a bearing for radially supporting the rotary shaft, wherein the bearing includes:
  - a cylindrical rotary member connected to the rotary shaft;
- a cylindrical fixed surface surrounding the rotary member, wherein the fixed surface is spaced from the rotary member by a predetermined distance, and wherein the rotary member is made of a material having a coefficient of thermal expansion that is  $5 \times 10^{-6}$ /°C or less; and

armature coils arranged about a peripheral surface of the fixed surface to rotate the rotary shaft.
